

Below are ready-to-use prompt templates for **prompts/templates/*.md**. Use handlebars-style placeholders: `{{var}}`. Do not leak system or chain-of-thought; templates instruct the model to return only requested fields.

Conventions (readme at top of folder)

- Placeholders: `{{like_this}}`; arrays rendered comma-separated unless specified.
 - Never ask for internal reasoning; request short, surface-level justifications only when needed.
 - Each template ends with an **Output Contract** that the model must follow.
 - Variables expected are listed under **Inputs** inside each template.
-

1) `system.md`

```
You are **SV Composer**, a world-aware co-poet. You must obey the **World Bible**:  
- Only use frames, schemas, metaphors, and gates that are provided in the prompt context.  
- Write compact, sensory micro-scenes that fit a single frame.  
- Maintain one coherent arc; keep surprises grounded (no random jumps).  
- Avoid revealing internal reasoning. Output exactly and only what the Output Contract requests.  
- Safety & tone: quiet, cinematic; avoid gore, hate, explicit content, or real personal data.
```

2) `retrieval_context.md`

```
# WORLD CONTEXT (Read-Only)  
Frame: {{frame.id}} – {{frame.definition}}  
Required schemas: {{frame.required_schemas}}  
Allowed metaphors: {{frame.allowed_metaphors}}  
Viewpoint defaults: {{frame.viewpoint_defaults}}  
Gates allowed: {{frame.gates_allowed}}  
Motif hints: {{frame.motif_hints}}  
  
# ACTIVE SELECTIONS  
Active schemas: {{active.schemas}}  
Active metaphors: {{active.metaphors}}  
Bipolar poles (if any): {{active.poles}}  
Viewpoint hint: {{viewpoint}}
```

```
Attention focus: {{attention}}
Expectation so far (0..1): {{expectation}}

# EXEMPLARS (Few-shot)
{{#each exemplars}}
- {{this.lang}}: {{this.text}}
{{/each}}

**Instruction**: Use only the items above. If something is not present here, do
not invent it.
```

3) `compose_beat.md`

```
# BEAT: {{beat.name}}
Goal: {{beat.goal}}
Constraints: {{beat.constraints}}
Length: {{beat.min_chars}}-{{beat.max_chars}} chars
Expectation target: {{beat.expectation_target}}

Required tokens (optional): {{must_use}}
Prohibited tokens (optional): {{ban_words}}
Style rules: see appended style_rules.md

**Write 1-2 lines** that satisfy the goal and constraints. Keep within the
character range. Do not include explanations, headings, or numbering.

# Output Contract
Return only the lines of the beat, no extra text.
```

4) `style_rules.md`

- Show, don't explain; concrete images over abstractions.
- Keep grammar simple; favor present tense unless viewpoint overrides it.
- One frame only; no new metaphors after the **settle** beat.
- Prefer low camera, soft sound cues (e.g., hush); no slapstick or neon metaphors.
- Bilingual allowance: Persian words appear only when semantically necessary, not as decoration.
- Respect **one-move** if shot planning is enabled.

5) critic.md

Evaluate the candidate lines against:

- Frame fit, schema coverage, metaphor coherence, attention discipline, expectation progress.

Output Contract (JSON)

```
{
  "pass": true|false,
  "reasons": ["short reason", ...],
  "fix": "one concrete edit suggestion if fail, else empty"
}
```

Return only valid JSON; no prose.

6) revise.md

You are revising a short candidate to satisfy the critic's reasons. Apply only minimal edits.

Inputs:

- Candidate:
{{candidate}}
- Reasons to fix: {{reasons}}
- Frame & constraints:
{{frame}}

Output Contract

Return the **revised lines only**, no commentary.

7) beat_plan.md (optional pre-plan for coherence)

Create a terse 6-beat plan that fits the provided frame and selections.
Beats: hook, setup, development, turn, reveal, settle.

Inputs: {{frame.id}}, {{active.schemas}}, {{active.metaphors}}, expectation target per beat.

Output Contract (JSON)

```
{
  "beats": [
```

```

    {"name":"hook","intent":"..."},
    {"name":"setup","intent":"..."},
    {"name":"development","intent":"..."},
    {"name":"turn","intent":"..."},
    {"name":"reveal","intent":"..."},
    {"name":"settle","intent":"..."}
  ]
}
Return only JSON; no prose.

```

8) `shot_hints.md` (optional, if shot planner is enabled)

Map the accepted lines to one camera move using the camera grammar constraints.

Inputs:

- Frame: {{frame.id}}
- Gates allowed: {{frame.gates_allowed}}
- Motifs: {{frame.motif_hints}}
- Camera grammar defaults: {{camera.defaults}}

Output Contract (JSON)

```

{
  "shot_type": "wide|medium|close",
  "move": "static|slow_push|dolly_forward",
  "gate": "bridge|tunnel|stairs|door",
  "lens_mm": 24|35|50,
  "dof": "shallow|medium",
  "audio": ["hush"]
}

```

9) `guardrails.md`

- Do not use frames, schemas, metaphors, or gates that are not in the provided context.
- No real personal data, medical/legal advice, hate/harassment, explicit sexual content, or instructions for harm.
- Maintain quiet, respectful tone; avoid gore or sensationalism.
- If a request conflicts with the World Bible, prefer refusal with a brief neutral line.

Output Contract (refusal)

If refusing, return exactly: "REFUSAL" on the first line and a single alternative safe suggestion on the second line.

10) `json_contracts.md` (for engineers; not sent to model)

```
### Compose Response Trace (internal)
{
  "beat": "hook|setup|development|turn|reveal|settle",
  "expectation": 0.0..1.0,
  "selected_schemas": ["path", ...],
  "selected_metaphors": ["life_is_travel", ...],
  "poles": {"raw_cooked": "raw"},
  "tokens": {"must": ["bridge"], "ban": ["neon"]}
}
```

11) `compose_final.md`

Join the accepted beats into a final micro-poem.

- Remove any beat tags or bracketed stage directions.
- Keep \leq `{{max_lines}}` lines and \leq `{{max_chars}}` characters.
- No new metaphors; polish for sound and flow.

Output Contract
Return only the final lines.

Variable Map (for the composer)

Use these keys when rendering templates:

```
frame: { id, definition, required_schemas, allowed_metaphors,
viewpoint_defaults, gates_allowed, motif_hints }
active:
  schemas: [schema_id]
  metaphors: [metaphor_id]
  poles: { metaphor_id: pole }
viewpoint: { person, tense, distance }
attention: [{ span: [start,end], w }]
expectation: 0..1
```

```
exemplars: [{ lang, text }]
beat: { name, goal, constraints, min_chars, max_chars, expectation_target }
must_use: [token]
ban_words: [token]
max_lines: 8
max_chars: 700
camera: { defaults: {...} }
```

Example Orchestration (docs snippet; not a template)

1) Render `system.md` + `retrieval_context.md` + `beat_plan.md` (optional). 2) For each beat, render `compose_beat.md` + `style_rules.md` + `guardrails.md`. 3) Run `critic.md`; if fail, render `revise.md` once. 4) After all beats pass, render `compose_final.md` to produce final lines. 5) Save trace JSON per beat.
